Program Goals and Student Learning Outcomes
The 24-month program in radiologic technology will prepare you to function as an entry-level radiographer and will introduce you to the more advanced imaging modalities. The program seeks to provide an educational environment enabling you to meet the following goals and student learning outcomes:

Goal 1 - Students will demonstrate clinical competence.
Student Learning Outcomes:

- Students will provide age appropriate patient care.
- Students will practice appropriate radiation safety.
- Students will select proper technical factors.
- Students will position patients to yield diagnostic images.

Goal 2 - Students will utilize problem solving skills and critical thinking skills.
Student Learning Outcomes:

- Students will adjust standard procedures for non-routine patients.
- Students will adjust equipment and/or technical factors to yield diagnostic images.

Goal 3 - Students will demonstrate effective communication with patients, peers and others in the medical profession.
Student Learning Outcomes:

- Students will demonstrate effective oral communication skills.
- Students will demonstrate effective written communication skills.
- Students will provide patient and family education related to procedures being performed.

Goal 4 - Students will display professionalism.
Student Learning Outcomes:

- Students will protect patient confidentiality.
- Students will develop a Career Portfolio.
- Graduates will seek training in another modality, have taken an additional registry or will have advanced their degree.
